

<https://511.org/open-data/transit>

OK HERE ARE THE INSTRUCTIONS!!!

1. Download from my drive (the whole folder). Don't change any names plz
<https://drive.google.com/drive/folders/1BfCnOEtuOyjH90cb5unVT7TU5qpPnDLd?usp=sharing> btw this is my school acc
2. Move to a spot where you know where it is in your file explorer!! You can put it in the bay area transit file folder, but not recommended bc then you can't push anything.
3. Go into VS code and open that file folder (in the terminal text, you should see map-data as the last file in the path)
4. Enter this (ONLY ONCE)
 - a. `java -Xmx6G -jar otp-shaded-2.8.1.jar --build --save "../map-data"`
5. WAIT for it to finish (takes a while)
6. Then enter this (do it every time you want to open the server)
 - a. `java -Xmx8G -jar otp-shaded-2.8.1.jar --load . --serve`
7. Ok this part im not too sure, it works for me but idk (i can't rllly remember but i THINK there was a link that it provided for you in the terminal after it finishes building, if not, use the link i have)
 - a. Take that giant localhost:8080 link below and paste it into your browser
8. And it should work

```
java -Xmx6G -jar otp-shaded-2.8.1.jar --build --save "../map-data" [ONLY ONCE]
```

```
java -Xmx8G -jar otp-shaded-2.8.1.jar --load . --serve
```

[Every time you want it open]

Ignore this stuff idk:

cd ../file-name

Ls: list

Pwd:: current directory

Environment variable (copy flutter path)

POWERSHELL \$env:Path += 'C:\Users\acryl\flutter\bin'

Make sure to write flutter.bat
